DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of claims 10-16 in the reply filed on 2/19/08 is acknowledged.

Drawings

2. The subject matter of this application admits of illustration by a drawing to facilitate understanding of the invention. Applicant is required to furnish a drawing under 37 CFR 1.81(c). No new matter may be introduced in the required drawing. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d).

Specification

3. The disclosure is objected to because of the following informalities: The specification – as originally filed- does not support claims 11 and 12 as presented in the pre-amendment filed on 3/24/05. Nowhere in the disclosure were found the limitations of the thermohydrolytically decomposable binder, and/or the use of a polyurethane dispersion.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 10-11, 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Inoue et al. (US5118982).

Regarding claim 10, Inoue discloses a piezoelectric transformer (figures 2-11, 14, 16A-B, 18, 25-26, 29) comprising: ceramic layers comprising a hard piezoelectric material (PZT, PT); and an electrode layer comprising copper (column 11, lines 43), the electrode layer being disposed between the ceramic layers.

Regarding claim 11, Inoue discloses the use of a polyvinyl binder (col. 6, line 56).

Regarding claim 16, please note that the method of making a device does not differentiate from the prior art. The limitation has been given little patentable weight.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 12-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Inoue in view of Kikko (JP 04-074777A).

Inoue discloses the stack being produced from ceramic green foils, as explained above. However, Inoue fails to disclose the use of a thermohydrolytically degradable binder, wherein the binder is a polyurethane dispersion.

Kikko discloses a piezoelectric ceramic composed of a piezoelectric ceramic powder such as PT-PZ and a binder such as polyurethane. Kikko produces a dense piezoelectric ceramic layer.

Therefore, it would have been obvious at the time of the invention was made to use a polyurethane dispersion to form a dense piezoelectric ceramic layer.

Regarding claims 13-15, the Examiner takes Official Notice that it is well known in the art to replace part of the Pb with low valence cations. It is old and known in the art to improve the piezoelectric characteristics of a dielectric material by replacing Pb with cations, such as Mn, Nb, La.

Therefore, it would have been obvious at the time of the invention was made to improve the piezoelectric characteristics of the PZT films by replacing some of the Pb with other cations.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
